

We were playing a softball game this past spring and our Earth Networks system showed that some pretty bad storms were moving in. At our complex, there were also several youth games going on. When the horn and alert went off, we were very happy that we got the fields cleared in time and extremely happy with the service. It is awesome!"

Mark Albertini, Athletic Director at Carbondale Community High School

ASK ABOUT A WEATHER STATION

View and share weather data in real time from your own weather station and online weather center

KEEP YOUR PLAYERS SAFE FROM SEVERE WEATHER WITH AUTOMATED MONITORING & ALERTS

Protect players, coaches, spectators, and staff from dangerous weather conditions like lightning, pop-up thunderstorms, high winds, and extreme heat with the latest weather safety tools.

OVERVIEW

Our Athletic Safety experts work with you to build a scalable, custom weather risk management solution that addresses your specific challenges and includes:

- ▶ Real-time weather monitoring
- ▶ Multi-channel alerting
- ▶ Mass notification systems
- ▶ Public information displays

BENEFITS

Automatically clear outdoor areas near and far when lightning approaches your facility

Reduce false alarms with highly accurate alerts powered by a high-density total lightning detection network

Increase weather intelligence with public weather displays, an online weather center, and countdown clock

Meet state requirements for WBGT monitoring and alerting with real-time, automatic measurements (not manual calculations) and multi-channel alerting

KEY FEATURES

- ▶ Full coverage indoor/outdoor lightning alert system
- ▶ Automated multi-channel alerting with alert silence times
- ▶ Real-time countdown clock, which resets automatically when lightning enters your custom alert radius
- ▶ Storm “estimated time of arrival” and mobile countdown clock
- ▶ 24/7 phone, email, and chat support from our meteorologists

AUTOMATIC WEATHER ALERTING FOR YOUR FACILITY

Secure your entire sports facility from the threats of lightning and heat stress with a custom configuration of lightning sirens and weather stations. With everything from real-time WBGT mobile alerts to 110db solar-powered lightning horns, you have complete control over where and how life-saving alerts are issued to everyone from players to staff.

DETECTING LIGHTNING
WITH THE ENTLN

The Earth Networks Total Lightning Network (ENTLN) detects dangerous in-cloud and cloud-to-ground lightning strikes 24/7, anywhere in the world and passes this information in real time to our suite of weather monitoring and alerting solutions.
